SEHATI HEALTHCARE PLATFORM

Presentation Overview & Agenda

01. The Problem
Fragmented medical records & diagnostic waste in private healthcare.

02. The Sehati Solution
A centralized platform anchored by the Unified Patient ID.

03. Key Modules & Features
Longitudinal history, digital Rx, emergency card & consent engine.

04. Market & Customers
Primary & secondary healthcare segments and growth targets.

05. Competitive Analysis
How Sehati outperforms Vezeeta, SehaFile, and DIME.

06. Database & Security
3NF relational architecture, RBAC, and HIPAA-level audit trail.

07. MedicPro UI/UX System
High-velocity clinical interfaces and patient mobile portal.

08. Roadmap & Funding
MVP rollout, strategic partnerships, and grant milestones.

SEHATI HEALTHCARE PLATFORM

The Core Healthcare Dilemma: Data Fragmentation

THE CENTRAL PROBLEM

Patient medical records are scattered across disconnected private clinics and healthcare providers, making it nearly impossible for doctors to access a complete, up-to-date medical history.

P-01

Repeated Medical Tests

Patients endure unnecessary blood work and radiological scans, resulting in severe financial and physical burdens.

P-02

Incomplete Medication Regimens

Doctors prescribe without visibility into active drugs, creating dangerous contraindication risks.

P-03

Diagnostic & Decision Delays

Physicians spend critical consultation minutes reconstructing history through verbal patient recall.

P-04

Disrupted Care Continuity

Zero longitudinal tracking between primary care physicians, cardiologists, and emergency doctors.

SYSTEM ARCHITECTURE

The Solution: A Centralized, Unified Platform

CORE PILLAR: UNIFIED PATIENT IDENTIFIER (SH-YYYY-XXXXXX)

A single universal health identity connecting every visit, diagnosis, lab report, and prescription across all participating private clinics and medical centers.

Connected Health Records

Breaks data silos, ensuring that a specialist in Heliopolis has authorized access to notes written by an internist in Maadi.

Patient-Governed Sharing

Zero-trust privacy where the patient explicitly grants temporary or longitudinal access (View Only or View & Add).

Faster, Evidence-Based Care

Empowers clinicians with immediate historical context, cutting consultation friction and eliminating duplicate lab costs.

SYSTEM MODULES

Key Platform Features & Capabilities

FEATURE 1

Unified Patient ID

One unique, lifetime identifier assigned at registration for seamless cross-clinic patient lookup.

FEATURE 2

Digital Medical History

Chronological repository storing clinical notes, past diagnoses, active allergies, and long-term medications.

FEATURE 3

Emergency Medical Profile

Critical vital data (blood type, life-threatening allergies, emergency contacts) accessible instantly during emergencies.

FEATURE 4

Test & Scan Central Archive

Secure cloud repository organizing blood tests, pathology assays, and radiological imaging (X-Ray/MRI/CT).

FEATURE 5

Digital Prescriptions

Structured, legible e-prescriptions with normalized medication line-items and automated patient archiving.

FEATURE 6

Appointments & Follow-ups

Integrated clinic queue sequencing, automated appointment confirmations, and scheduled follow-up tracking.

MARKET ANALYSIS

Target Market & Customer Segments

PRIMARY TARGET: PRIVATE CLINICS

1. Private Clinics & Solo Practitioners (Core Market)

Specialist doctors and private clinics requiring high-velocity 30s patient history lookups, streamlined queue management, and digital prescriptions without enterprise bloat.

2. Patients & Chronic Care Individuals

Individuals managing lifelong health journeys desiring complete digital ownership of medical records, instant emergency profile access, and granular consent sharing.

SECONDARY TARGET: HOSPITALS & HEALTH SYSTEMS

1. Hospitals & Medical Polyclinics (Federation Phase)

Regional hospital networks targeted for secondary federation, ER patient history lookups, and structured outpatient referral connectivity.

2. Diagnostic Labs & Radiology Centers

Diagnostic facilities that can upload tests and scan results directly to the patient's verified unified record.

3. Ministry of Health (MoH) & Regulators

Public sector authorities seeking regional health data coordination, epidemiological monitoring, and universal insurance integration.

COMPETITOR COMPARISON

Competitive Landscape & Market Positioning

Vezeeta

Booking & Marketplace Focus

CORE MODEL:

Specializes in doctor discovery, clinic scheduling, and teleconsultations.

LIMITATION / EDGE:

Does NOT provide a unified longitudinal medical history across independent clinics; medical records remain fragmented.

SehaFile

Personal Health Record (PHR)

CORE MODEL:

Offers individual patient digital profiles, appointment logs, and document storage.

LIMITATION / EDGE:

Limited doctor clinical workflow tools; lacks multi-tenant private clinic queue synchronization and unified ID network effects.

DIME

Enterprise HIS / HIE Architecture

CORE MODEL:

Complex health information exchange connecting major enterprise hospitals and large lab chains.

LIMITATION / EDGE:

Prohibitively expensive, complex, and unsuited for independent private clinics and outpatient doctors.

SEHATI

The Connected Clinic & Patient Solution

CORE MODEL:

Combines high-velocity clinic EMR, Unified Patient ID, patient-governed consent, and instant emergency profile.

LIMITATION / EDGE:

Tailored specifically for private clinics, cost-effective, low-friction, and empowering for both doctors and patients.

THE SEHATI PROMISE

Our Core Value Proposition

“One Patient, One Medical History, Better Healthcare.”

While existing platforms focus mainly on booking, clinic billing, or isolated records, Sehati unites the patient’s entire healthcare journey in one continuous, secure platform.

For Patients

Complete peace of mind, full record sovereignty, zero duplicate lab fees, and instant emergency protection.

For Doctors

Rapid 30-second patient history lookup, evidence-backed clinical decisions, and streamlined digital prescription authoring.

For Clinics

Paperless operations, organized front-desk queuing, reduced administrative overhead, and elevated clinic reputation.

COMPETITIVE ADVANTAGE

Strategic System Advantages

ADVANTAGE 01

Unified Patient Passport

One centralized digital identity connects visits across multiple independent clinics, eliminating disjointed paper folders.

ADVANTAGE 02

Complete Longitudinal History

Consolidates diagnoses, clinical notes, active medications, lab panels, and imaging scans into a coherent medical narrative.

ADVANTAGE 03

Optimized Healthcare Coordination

Facilitates seamless communication between internists, surgeons, and specialists to prevent conflicting treatment plans.

ADVANTAGE 04

Substantial Cost & Time Savings

Eliminates duplicate blood tests, reduces patient consultation delays, and accelerates emergency triage response.

RISK MANAGEMENT

Challenges & Proactive Mitigation

CHALLENGE 01

Data Privacy & Security

THE RISK:

Medical data mandates uncompromising protection against unauthorized access.

OUR MITIGATION:

MITIGATION: Strict Zero-Trust RBAC, AES-256 encrypted fields, immutable audit logging, and Egyptian Law 151 compliance.

CHALLENGE 02

Doctor Adoption Friction

THE RISK:

Busy doctors resist tedious software that slows down clinical consultations.

OUR MITIGATION:

MITIGATION: Sub-2-minute consultation UX, pre-populated diagnosis templates, rapid medication autocomplete, and speech-to-text dictation.

CHALLENGE 03

System Integration & Costs

THE RISK:

Connecting disparate clinics, legacy software, and diagnostic labs poses technical friction.

OUR MITIGATION:

MITIGATION: Lightweight RESTful API architecture, zero-install cloud web portal, and phased onboarding for partner clinics.

SYSTEM ARCHITECTURE

Relational Database Design Highlights

ARCHITECTURAL HIGHLIGHT 01

23 Normalized Entities

Strict 3NF database schema decoupling users, clinics, encounters, prescriptions, and granular clinical data.

ARCHITECTURAL HIGHLIGHT 02

Normalized Prescription Items

Separates prescription metadata (doctor, visit, timestamp) from multiple pharmacological items (dosage, frequency).

ARCHITECTURAL HIGHLIGHT 03

Granular Access Control Engine

The AccessPermissions table enables patients to grant/revoke 'View Only' or 'View and Add' permissions with auto-expiry.

ARCHITECTURAL HIGHLIGHT 04

Immutable Audit Trail

AuditLogs records actor UserId, affected PatientId, action verb, timestamp, and IP address for full regulatory compliance.

DESIGN SYSTEM

UI/UX Design Language: The MedicPro Aesthetic

DESIGN PILLAR 01

Color Psychology

Deep Oceanic Teal (#0A4D68) establishes clinical authority, while Ice Blue (#EBF4F6) reduces cognitive fatigue.

DESIGN PILLAR 02

Glanceable Emergency UX

Allergies, blood group, and emergency contacts rendered in high-visibility crimson and mint alert badges.

DESIGN PILLAR 03

High-Speed Consultation

Split-screen interface allowing physicians to review past history while writing prescriptions in under 2 minutes.

DESIGN PILLAR 04

Accessibility First

WCAG 2.1 AA compliant, 4.5:1+ contrast ratios, large touch targets, and full keyboard navigation for clinicians.

GO-TO-MARKET

Funding Strategy & Strategic Milestones

STAGE 01

Bootstrapping — MVP Build

Self-funded agile development phase focused on core architecture, clinic EMR, Unified Patient ID, and pilot validation.

STAGE 02

Strategic Healthcare Partnerships

Partnering with private clinic networks, diagnostic lab chains, and the Egyptian Ministry of Health for integrated clinical pilots.

STAGE 03

Grants & Startup Competitions

Targeting health-tech innovation competitions, ITIDA acceleration programs, and Egyptian Digital Transformation initiatives.

STAGE 04

B2B SaaS Revenue Model

Tiered monthly subscription for clinics covering queue management, multi-branch syncing, and analytics; free for individual patients.

THANK YOU!

“One Patient, One Medical History, Better Healthcare.”

Sehati is ready to lead the future of connected healthcare in Egypt and beyond.

Questions & Discussion
